Summary

Software Engineer specializing in data engineering, automation, and AI-driven solutions. Proven experience building RAG systems, metadata-driven pipelines, and scalable data workflows for enterprise use cases in healthcare and business domains.

Professional Experience

Software Engineer, – Present
Promoted from Intern to AI Engineer (Present)

Data Processing

- Built end-to-end URL Safety Checker Real-time malicious URL detection analysis
- Designed scalable ingestion, preprocessing, and embedding workflows for efficient semantic search and retrieval
- Implemented LLM-based summarization and entity extraction with structured outputs for downstream applications
- Applied AI guardrails including sensitive data masking, validation layers, and controlled response generation

CarePath – Data Engineering (Johnson & Johnson)

- Developed metadata-driven framework to replace hardcoded SQL logic, improving scalability and maintainability
- Automated query generation, view creation, and business rule execution using Python-based configurations
- Implemented dynamic joins, validation rules, and data quality checks across multiple enterprise datasets

Data Automation & Business Intelligence

- Built Selenium-based automation pipelines for large-scale web and client data extraction and preprocessing
- Developed interactive Power BI dashboards for KPI tracking, trend analysis, and business reporting
- Performed data transformation, validation, and workflow optimization to support decision-making processes

Internships

Full Stacks Intern — Royaal Coats India Ltd., Coimbatore

Architected, implemented, tested, and launched a full-stack web application with complete end-to-end capabilities.

Signalling and Telecom Intern — Indian Railways, Coimbatore

Assisted in monitoring, troubleshooting, and analyzing signaling and telecom infrastructure through SCADA platforms.

Education

B.Tech — Information Technology 2024 – 2027

SNS College of Technology CGPA: **8.81 / 10**

Diploma — Information Technology 2021 – 2024

PSG Polytechnic college Percentage: **80.1 %**

SSLC 2016 – 2021

AVB High School, Coimbatore

Technical Skills

Languages	Python, SQL, C
Generative AI	LLMs, RAG, LangChain, Prompt Engineering, Embeddings, FAISS, Pinecone
AI / ML	TensorFlow, PyTorch, Scikit-learn, Transformers, NLP
Data Engineering	ETL, Data Validation, Metadata-driven Systems
Backend	FastAPI, Flask, REST APIs
Databases	MySQL, Neo4j, Vector Databases
Tools	Git, Docker (Basics), Power BI, Selenium, Jupyter, VS Code, Linux

Key Projects

URL Detector – Malicious URL Detection System 2025

- Developed a web-based system to identify whether a URL is **safe or malicious** using Machine Learning techniques.
- Implemented **URL feature extraction** to analyze patterns such as domain length, special characters, redirects, suspicious keywords, and URL structure.
- Trained and evaluated Machine Learning models for phishing and malicious website detection.
- Automated threat analysis by processing URLs in real time and generating prediction results.

Diabetes Risk Prediction Model 2023

- Built predictive model using healthcare dataset to identify and classify diabetes risk levels
- Performed data cleaning, feature selection, and evaluation to improve prediction accuracy and reliability

IoT-Based Water Quality Monitoring 2022

- Designed IoT-based system using sensors for real-time monitoring of water quality parameters
- Integrated data collection with cloud-based visualization and alert mechanisms for continuous tracking

Certifications and Languages

Certifications: IoT Fundamentals NPTEL, Azure AI Fundamentals, Python with OOP, Machine Learning and AI, SQL, AI Guardrails, Data Science Event

Languages: English (Fluent), Kannada, Telugu, Tamil, Hindi (Conversational)
